

## **Summer Institute in Statistical Genetics @UQ February 2017**

### **[Registrations now open](#)**

In February 2017 the Summer Institute in Statistical Genetics will be offered in the capital city of Australia's sunshine state, Brisbane. Usually run at University of Washington, SISG @ UQ is positioned to make the Institute more accessible to students/postdocs/researchers in the Southern Hemisphere.

SISG @ UQ will consist of a series of two day modules, instructed by overseas and Australian experts and designed to introduce geneticists to modern methods of statistical analysis and to introduce statisticians to the statistical challenges posed by modern genetic data. The modular nature of the Institute enables participants to design a program best suited to their backgrounds and interests. Participants can enrol in up to four modules.

Individuals attending the Institute will receive certificates of course completion in recognition of their participation.

As part of SISG 2017, in addition to the teaching modules, UQ will host two all-day Research Symposia on Wednesday 8th and 15th of February providing delegates the opportunity to hear more about the current research of the module instructors.

There are a limited number of module fee waiver scholarships being offered for domestic and international applicants, see the website for more details regarding application dates and process.  
*Scholarship Applications **Close 30 September 2016***
