Professorship position in human genomics

A full permanent position of professor of genetics is now opened at University Pierre and Marie Curie, the first cutting edge research French university, located in the center of Paris [http://www.upmc.fr/en/index.html].

Duties associated with the professorship include both teaching and research activities.

Teaching activities would cover any aspects of human genomics that could include transcriptomics, epigenetics and statistical genomics. Fluent French language is not required as it will be possible to teach in English.

The post-holder will conduct his/her own research activities in connection with the groups of Laurence Tiret (Laurence.tiret@upmc.fr), David Tregouet (david.tregouet@upmc.fr) and Francois Cambien (francois.cambien@upmc.fr) within the Unit of Cardiovascular Genomics, INSERM UMRS 937 located near the University at the Pitié-Salpêtrière Hospital.

A large panels of research facilities will be available including Illumina genomic platform, a large and powerful computer cluster, important bio-resources as well as clinical facilities.

Candidates are invited to send their CV to Francois Cambien (francois.cambien@upmc.fr).
